PROVED SIRES IN ARTIFICIAL BREEDING SERVICE JANUARY 1, 1958

On January 1, 1958, there were 2,676 sires in artificial-breeding service in the United States. Of this number, 1,012, or 37.8 percent, were proved sires. A summary of the 1,012 proved-sire records is given in the following tables.

Table 1.--Summary of AB proved-sire records by breed

Breed	Number Sires	Dams			Daughters		
		Milk	Test	Fat	Milk	Test	Fat
		Pounds	Percent	Pounds	Pounds	Percent	Pounds
Ayrshire	56	9,675	4.1	400	10,769	4.3	459
Brown Swiss	67	11,031	4.0	447	11,446	4.2	476
Guernsey	216	8,764	4.9	426	9,202	4.9	452
Holstein	464	12,892	3.6	468	13,553	3.7	504
Jersey	187	8,362	5.3	443	8,773	5.3	467
Shorthorn	21	8,184	3.9	316	8,792	3.8	338
Red Dane	1	9,930	3.8	376	9,337	4.2	396
Total or average	1,012	10,772	4.1	446	11,345	4.2	478

Table 2.--Number of proved sires in artificial-breeding service, listed by age and breed

Age (years)	Ayrshire	Brown Swiss	Guernsey	Holstein	Jersey	Shorthorn	Red Dane	Total
5-----	-	1	3	8	3	-	-	15
6-----	7	9	44	98	53	1	-	212

DHIA PROVED-SIRE RECORDS TABULATED IN JUNE 1958

Following is a list of 284 sires whose records were tabulated or retabulated by the Animal Husbandry Research Division in June 1958. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
